**Pliable, transparent grid structures made of stainless steel rope** from the **Jakob® INOX LINE** series are **multifunctional and durable**: mounted on railings or in staircases, they provide **support and guidance**; on façades, they can be used as **training systems** for plants; in large rooms, they will create subtle accents as filigreed partitions. The **Jakob® INOX LINE Webnet** was subjected to numerous tests and complies with all applicable standards: As a permanent **protective and safety net** for bridges or observation platforms, it is absolutely UV- and weather-resistant, unlike conventional knotted plastic fiber nets.

The **Jakob® INOX LINE Webnet** has the skin-like characteristics of a diaphragm. It can form a plane surface but can also be tensioned into three-dimensional forms featuring funnel-type, cylindrical, or spherical shapes.

## Webnet: Intelligent solutions in architecture and design

The Jakob® INOX LINE Webnet is a custom-manufactured, premium-quality product that is highly compatible with creative contemporary architecture. As part of our extensive, easy-to-assemble structural wire-rope series, it is ideal for flexible, intelligent solutions that address a vast variety of requirements: the multifunctional Jakob® INOX LINE Webnet technology combined with stainless steel rope, rods, or tubes with appropriate end connectors (Jakob® INOX LINE Basic 5.1 Green Solutions G1, and News X catalogues) not only discreetly fulfills its functions as a protective and supporting structure but also provides appeal as an elegant spatial design element.

### Support and protection function

A lake region in western Switzerland with a safe bird's-eye view: in the **tethered balloon** on a platform **at the Lake of Neuenburg**, visitors can ascend to a height of 150 m. The large "captive balloon" was installed as a tourist attraction in the summer of 2002, when the Swiss National Exposition (Expo) took place. The combined **support and protection structure** made of rods, wire rope, and the **Jakob® INOX LINE Webnet** components created an impressive, futuristic takeoff and landing ramp with guaranteed safety factors.

### Huarte (E)

#### Spatial net structure

- Webnet rope Ø 2.0 mm, mesh aperture 200 mm
- Webnet size total: 3100 m<sup>2</sup>

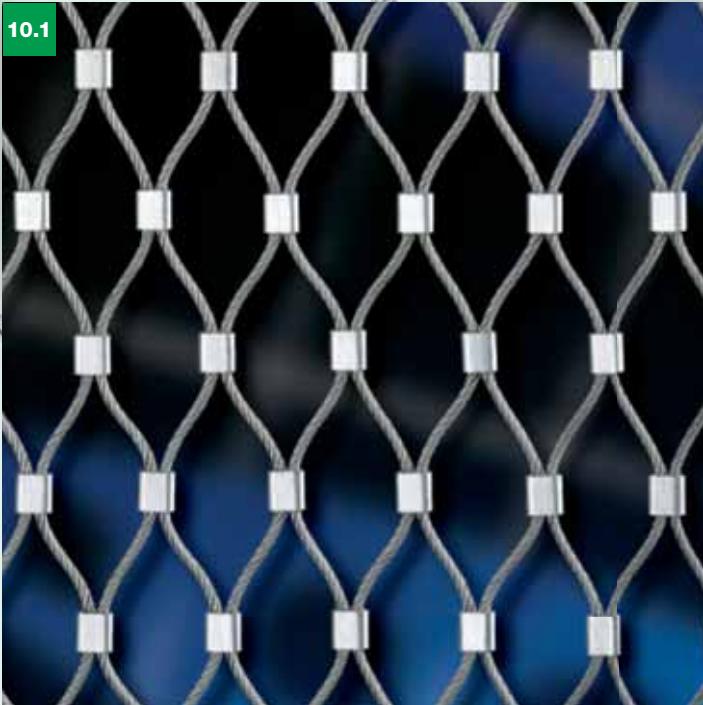

**Playground Argenteuil, Paris (F)**

**Ball catcher**

- Webnet rope Ø 1.5 mm, mesh aperture 60 mm
- Webnet size total: 120 m<sup>2</sup>

**Webnet** with mesh aperture **40 mm**  
and wire-rope **diameter 3.0 mm**

**Webnet** with mesh aperture **40 mm**  
and wire-rope **diameter 2.0 mm**

A fabric of particular resilience and flexibility, a “net” whose strands are neither knotted nor crossed: the **Jakob® INOX LINE Webnet** is a construction based on stainless steel wire ropes that lie parallel in pairs connected and reciprocally curved by offset sleeves.

The net construction can be pulled apart like an accordion, producing a spring force that varies depending on the mesh aperture and wire-rope thickness.

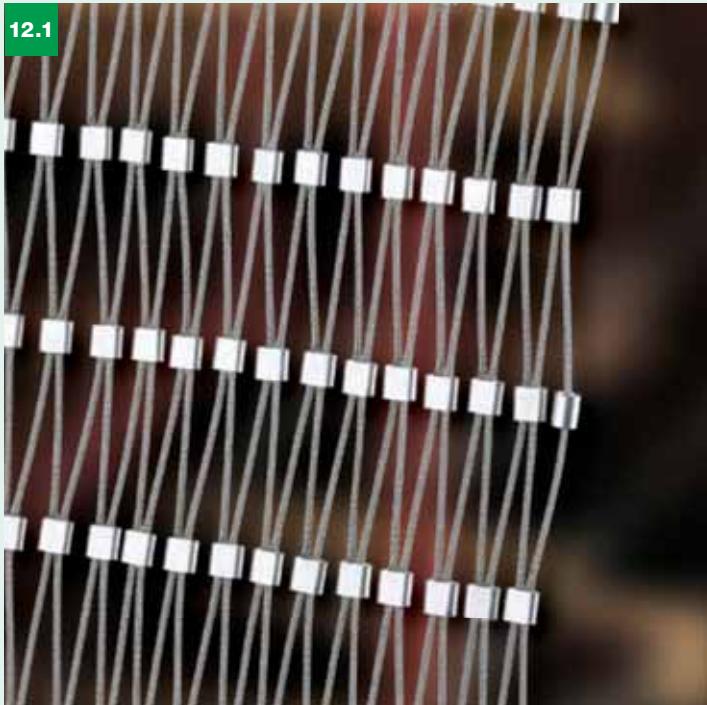

The **Jakob® INOX LINE Webnet** is a vibrant, premium-quality product: the **mesh aperture** (variable, from very tight to very wide) and the **wire-rope diameter** (1.0 mm, 1.5 mm, 2.0 mm, and 3.0 mm) determine its functionality and aesthetics. Most **Jakob® INOX LINE** components are made from the AISI 316 material group.

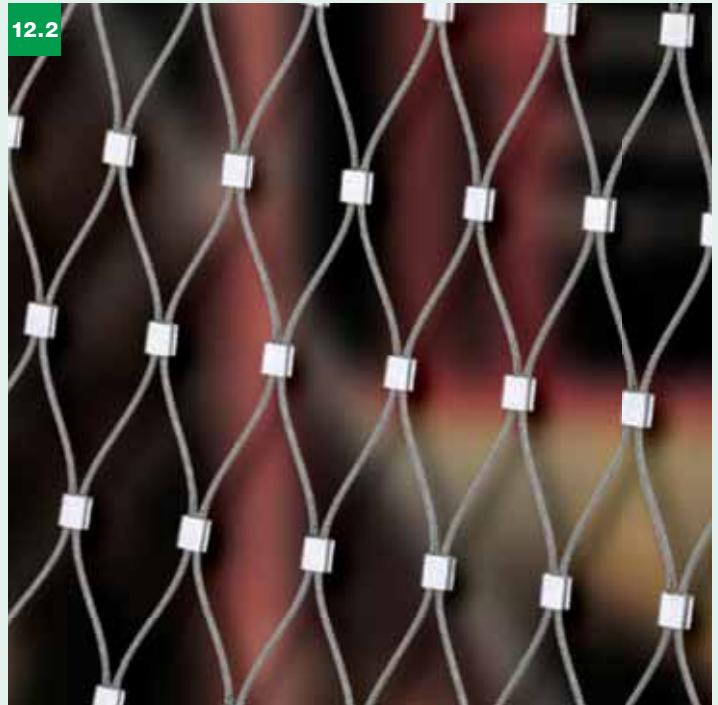

**Webnet** with mesh aperture **40 mm**  
and wire rope-diameter **1.5 mm**

**Webnet** with mesh aperture **40 mm**  
and wire rope-diameter **1.0 mm**

**12.1**

**Webnet** not tensioned (closed)

**12.2**

**Webnet** with 35° mesh angle

**12.3**

#### **Webnet test frame for the determination of the force/elongation diagrams**

The frame is used to determine the elongation of the **Webnet** in the height (**H**) and width (**W**) directions when exposed to different stretching forces. The insights form the basis of dimensioning and configuring the **Webnet** and the periphery structure.

**12**

**Webnet** with 50° mesh angle

**Webnet** with 60° mesh angle (**Jakob®** standard)

The Jakob® INOX LINE **Webnet**  
was tested pursuant to EN 1263-1  
for its static and dynamic load-bearing  
capacity.

Test data:

- **Webnet** size: length 7 m × width 5 m
- **Webnet** rope Ø 3.0 mm, mesh aperture 60 and 100 mm  
(horizontal and vertical meshes)
- **Webnet** rope Ø 2.0 mm, mesh aperture 60 and 100 mm  
(horizontal and vertical meshes)
- Suspension rope Ø 10.0 mm
- test object: 500-mm steel sphere, mass 100 kg
- drop height of test object: 7 m

**Webnet** with extended mesh angle:  
when stretched, the wire ropes load the sleeve (breaking limit).

**The characteristics of the ambient atmosphere determine the selection of the most suitable materials.**

A distinction is made between rural, urban, industrial, and maritime climates.

The urban and industrial atmospheres typically contain aggressive substances in the form of carbon-containing particles and sulfur dioxide ( $\text{SO}_2$ ).

Chloride ion-containing aerosols are found in maritime climates.

The rural atmosphere is comparatively benign.

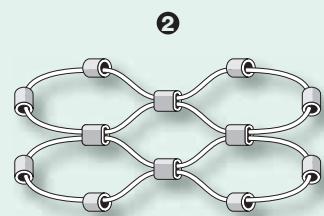

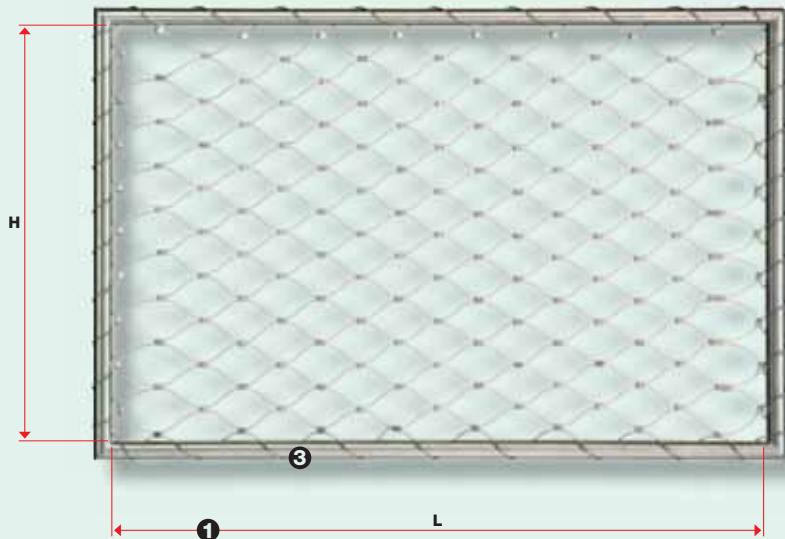

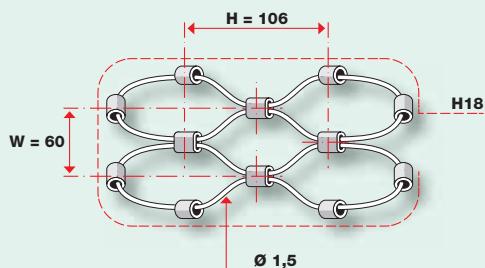

**Most Jakob® INOX LINE components are made from the AISI 316 material group.**

## Webnet order

Notes for convenient ordering

### Ordering example:

- ① Free clearance: **H mm × L mm**
- ② **Webnet type: A – H18 – Ø 1,5 – W 60 × H 106**  
**Order No. 20255-0150-060** (tin-plated copper sleeves)  
**Order No. 20256-0150-060** (stainless steel sleeves)  
 (see table on page 21)
- ③ Webnet perimeter rope on page 38  
**Part No. 10820-0150**

**A      H18      Ø1,5      W=60**

**19.1**

**A** The **Webnet** is available with wire rope and stranded wire. Types **A** or **B** are described on page 20.

**H18** The **Webnet** is manufactured with vertical (**V**) or horizontal (**H**) meshes. Different perimeter design configurations are needed depending on the periphery structure (**V1-V30** on page 26 and **H1-H30** on page 28).

**Ø1,5** The **Webnet** is manufactured with four wire-rope and stranded-wire diameters (see tables on page 21). **Webnet** technical data: see tables on pages 22 to 23.

**W×H** The **Webnet** is manufactured with different mesh apertures (**W × H**) (see tables on page 21).

### The Jakob® INOX LINE Webnet

#### is ideal for filigreed security structures:

- public safety measures
- protection against rockfall along hiking trails
- road barriers and protection in pedestrian zones
- safety net on bridges
- protection on panorama terraces or observation platforms
- protection against thrown objects
- protection in sports stadiums
- retention of floating debris in harbors, rivers, and lakes

## Webnet types

**The Jakob® INOX LINE Webnet,  
made of stainless steel  
rope 6 x 7 + WC and 6 x 19 + WC,**

is a multifunctional product for all types of protective applications where aesthetic appearance is also a must.

**A**

The **Jakob® INOX LINE Webnet A**,  
made of stainless steel rope 6 x 7 + WC  
and 6 x 19 + WC (AISI 316 material group).

**Rope 6 x 7 + WC**  
for Webnet rope Ø  
1.0 mm, 1.5 mm, and 2.0 mm

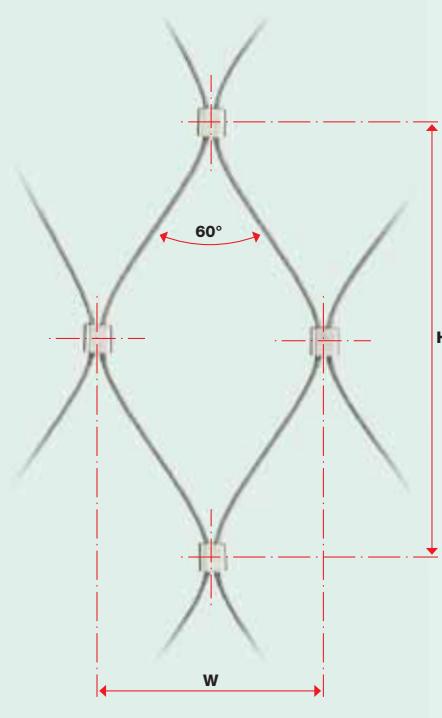

**Rope 6 x 19 + WC**  
for Webnet rope Ø  
3.0 mm

**B**

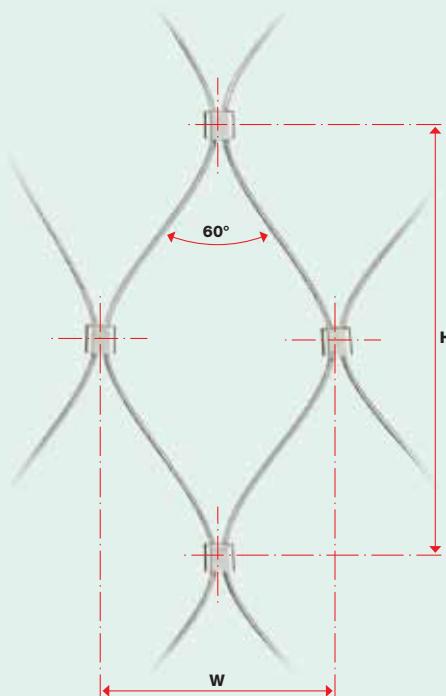

The **Jakob® INOX LINE Webnet B**,  
made of stainless steel stranded wire  
1 x 19 (AISI 316 material group).

**Stranded wire 1 x 19**  
for Webnet stranded wire Ø  
1.0 mm, 1.5 mm, 2.0 mm, and 3.0 mm

**60°** = standard mesh angle  
**W** = mesh aperture  
**H** = mesh aperture height

**60°** = standard mesh angle  
**W** = mesh aperture  
**H** = mesh aperture height

27.1

**Vertical mesh perimeter:**  
open at top with wire-rope end pairs

27.2

**Vertical mesh perimeter:**  
closed with uncompressed sleeves at top

27.3

**Webnet V: vertical mesh**

27.4

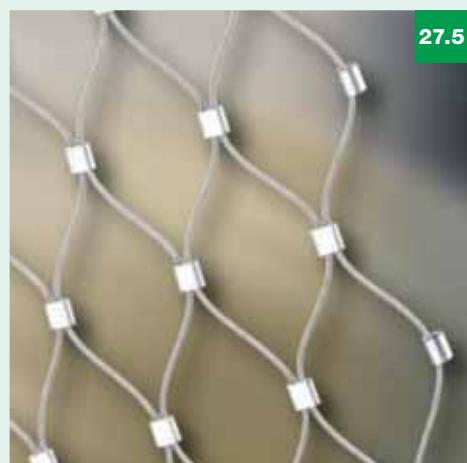

#### **Selection criteria for perimeter configuration V1 to V30**

- Construction of periphery structure, such as suspension ropes (p. 30/31), tubular frame (p. 32/33), rod system (p. 34/35), or Webnet C rail (p. 37)
- Overall dimensions of Webnet
- Assembly-related reasons
- Magnitude of Webnet pretension forces

#### **Some selection criteria for vertical (V) or horizontal (H) Webnet mesh orientation**

- Architectural considerations
- Vertical meshes are less suitable for climbing (safety factor load)
- Assembly-related reasons (tight radii always require vertical meshes)
- When the Webnet is tensioned, the forces are greater in the mesh height direction than in the mesh width direction.

**Vertical mesh perimeter:**  
with uncompressed sleeves at right

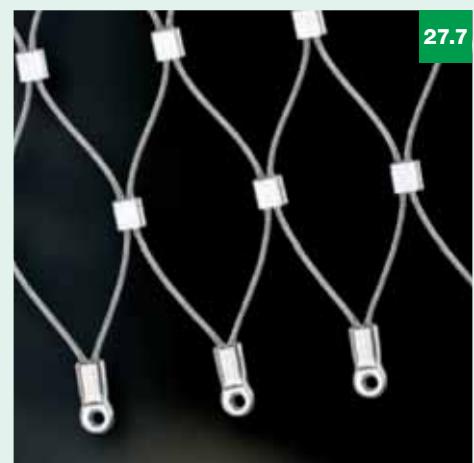

27.5

**Vertical mesh perimeter:**  
closed with uncompressed sleeves at bottom

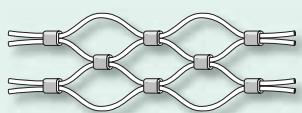

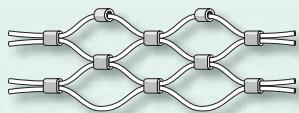

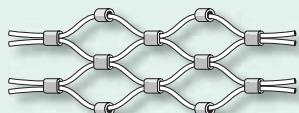

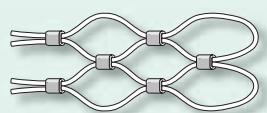

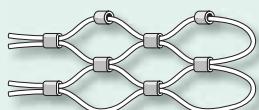

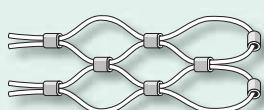

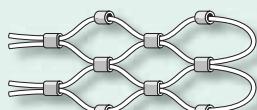

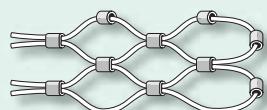

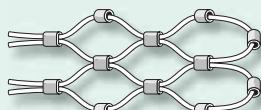

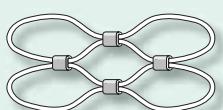

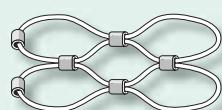

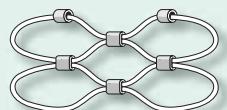

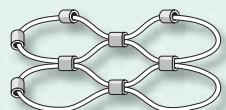

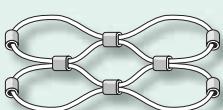

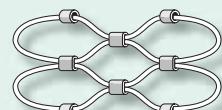

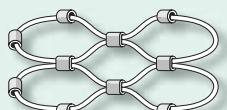

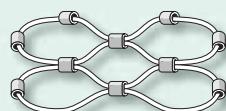

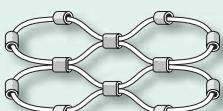

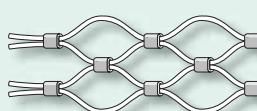

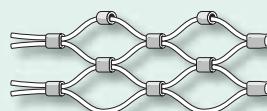

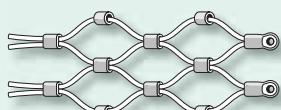

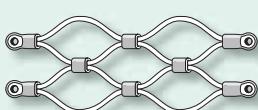

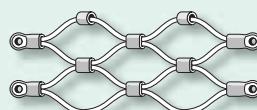

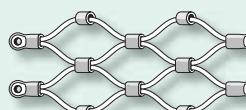

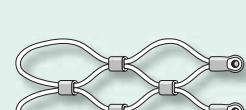

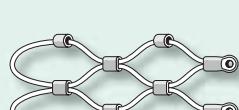

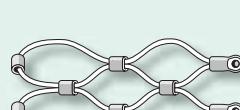

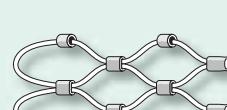

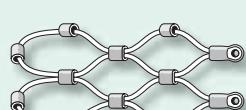

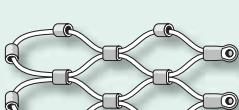

27.6

**Vertical mesh perimeter:**  
closed with Webnet eye ends at bottom

## Welded Webnet tubular frame

Fully strung tubular frames according to your drawings

AISI 316 material group

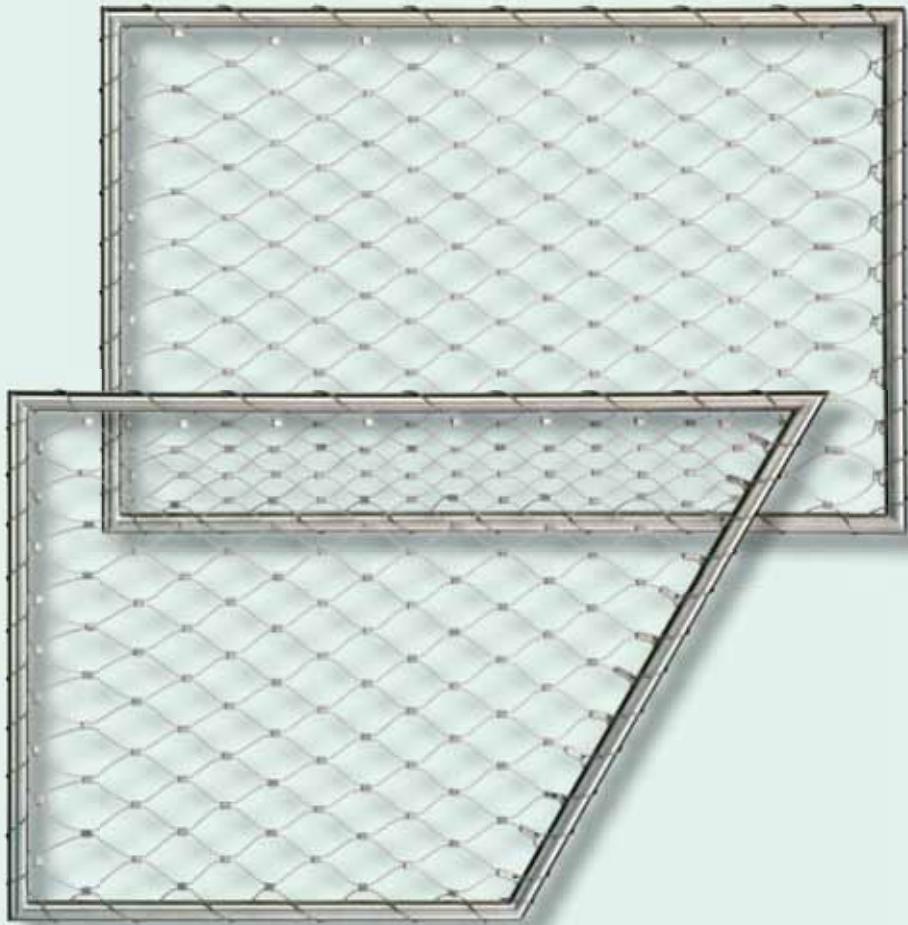

Part No.	For tube ø mm
<b>30924-0017-40</b>	<b>17,2</b>
<b>30924-0026-40</b>	<b>26,9</b>

### Welded Webnet tubular frame

Fully strung tubular frames according to your needs, with the matching assembly accessories for attachment to mounting structure.

What we need from you:

- dimensioned drawing of frame with tube Ø 17.2 or 26.9 mm
- **Webnet** order No. with rope Ø and mesh aperture **W**, Type **A** or **B**
- vertical mesh **V** or horizontal mesh **H**
- number of tube holders and spacers
- description of mounting surface
- see ordering example on **page 19**

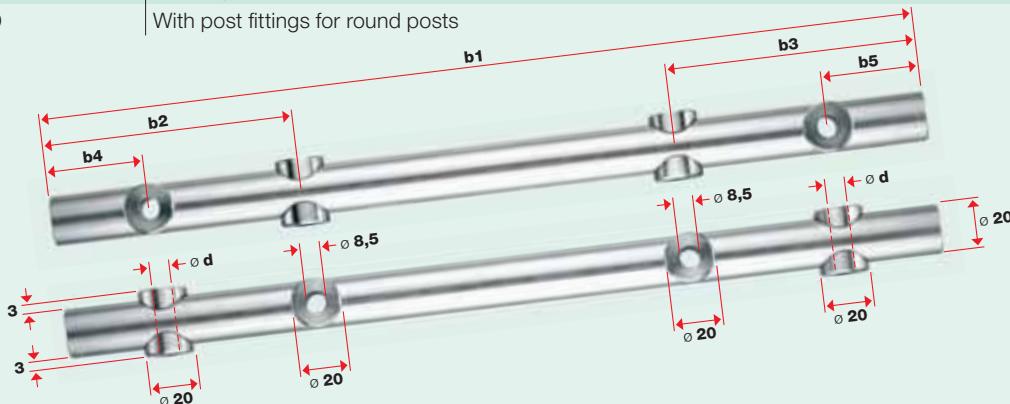

## Connecting rod

Custom-made according to drilling template, see dimensions **b1**, **b2**, **b3**, **b4** and **b5**  
Round posts: indicate post diameter

## Wall anchor with internal thread RH M8

Suitable exclusively for concrete

Part No.	Internal threads
30803-0800-02	M8

Galvanized steel

## FIS VS 150 C injection mortar with perforated sleeve HK

For hollow and solid walls

Part No.	Product
30803-0800-05	1 cartridge 145 ml with plunger disc, 2 mixer nozzles, 6 perforated sleeves HK
30803-0800-052	Mixer nozzle, separate
30803-0800-053	HK perforated sleeve, separate
30803-0800-051	Dispenser gun

FIS VS 150 C injection mortar is a 2-component resin mortar. The perforated sleeve is needed only for hollow masonry. The threaded rod can be glued directly into the hole of a concrete wall.

## Rampa screw-in nut for wood RH M8

With hex socket, type SK, ~DIN 7965

Galvanized steel

Part No.	Internal threads
30803-0800-04	M8

Predrill hole in wood: ø 14.5 mm

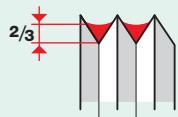

## Thread lock fluid VC3

Protects screws and nuts against spontaneous loosening

Part No.

30879-0001

The thread flanks must be filled at least 2/3 of the way.

Thread lock fluid VC3 is a lacquer-like coating that contains two separate, microencapsulated components.

The safety function is activated when the fluid is compressed as the threaded fastener is closed. The fastener is then protected against vibration; screws and nuts can no longer work themselves loose.

41.1

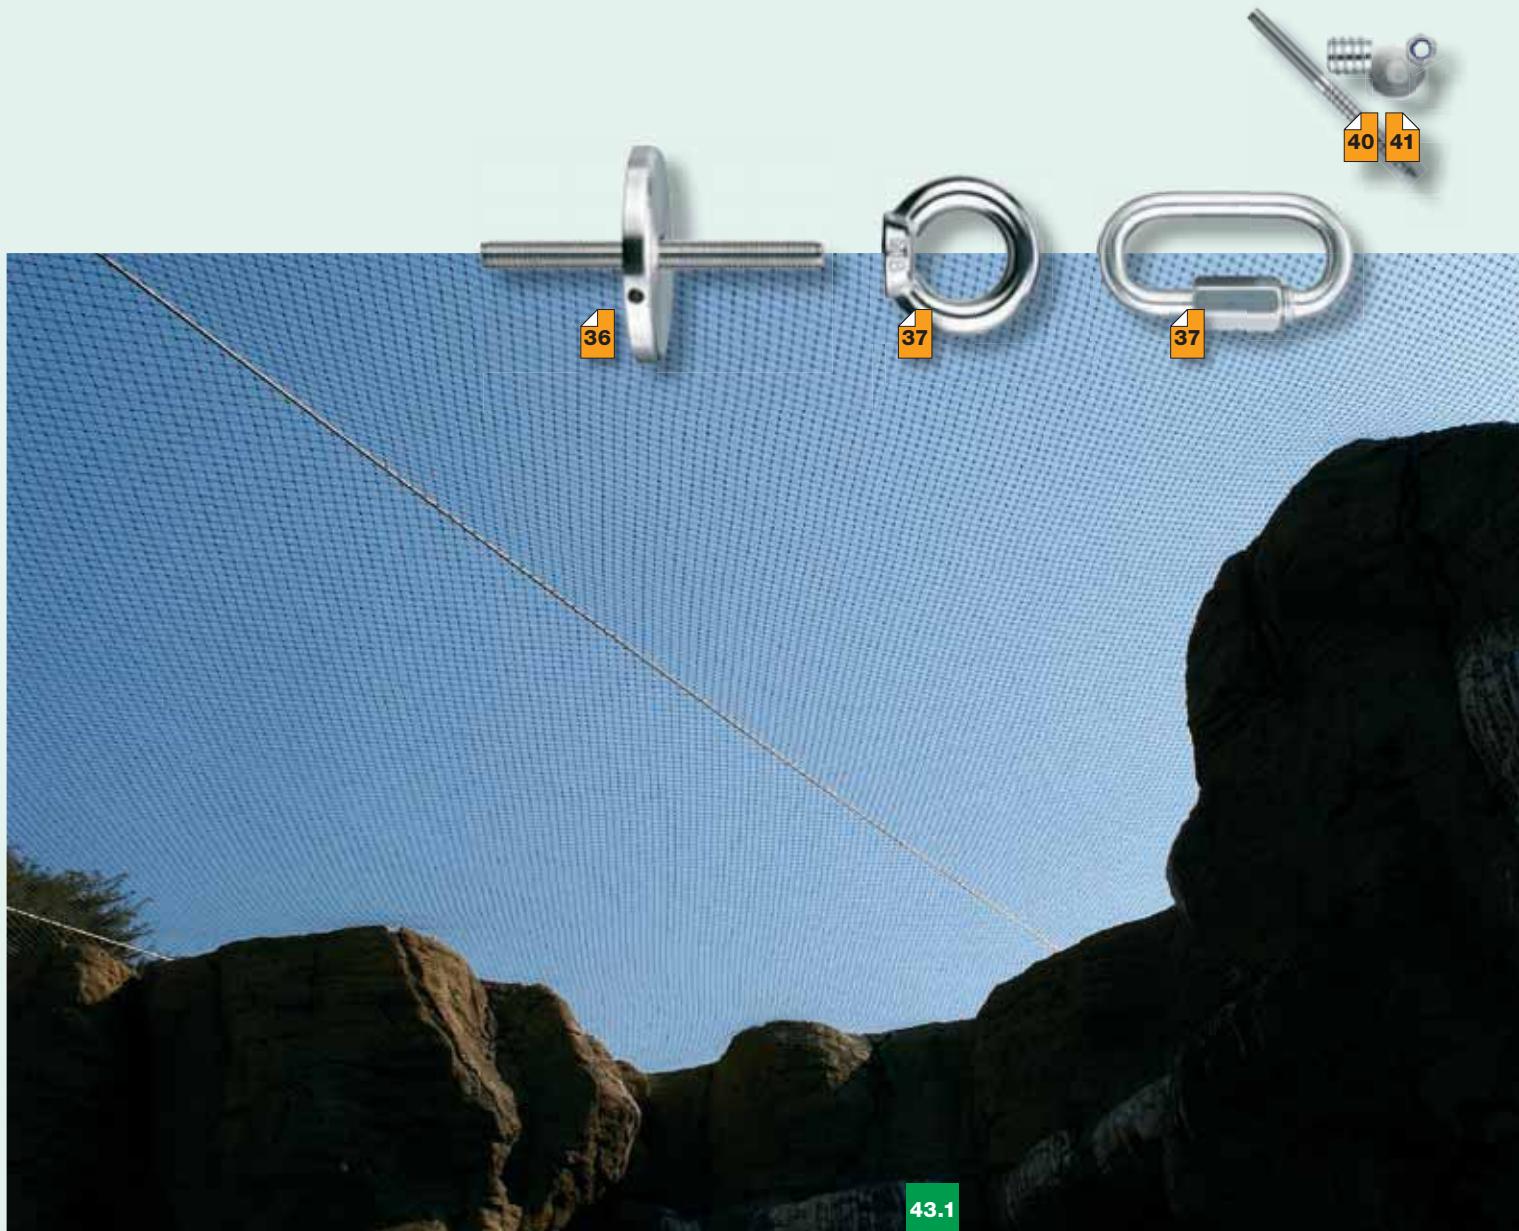

**Office building in Logrono (E)**

- Webnet rope Ø 1.5 mm, mesh aperture 100 mm
- Webnet size total: 2200 m<sup>2</sup>

**Enclosure at the Dublin Zoo (Ireland)**

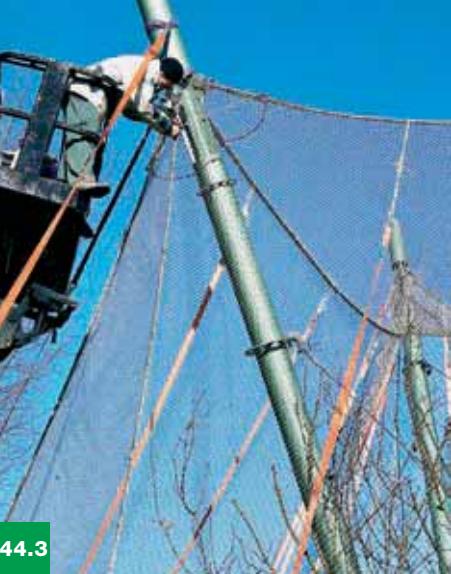

**Webnet size 420 m<sup>2</sup>**

- Periphery structure: stranded wire Ø 10.0 mm
- Webnet rope Ø 1.5 mm
- Webnet mesh aperture 40 mm

44.1 44.3

44.4

44.2

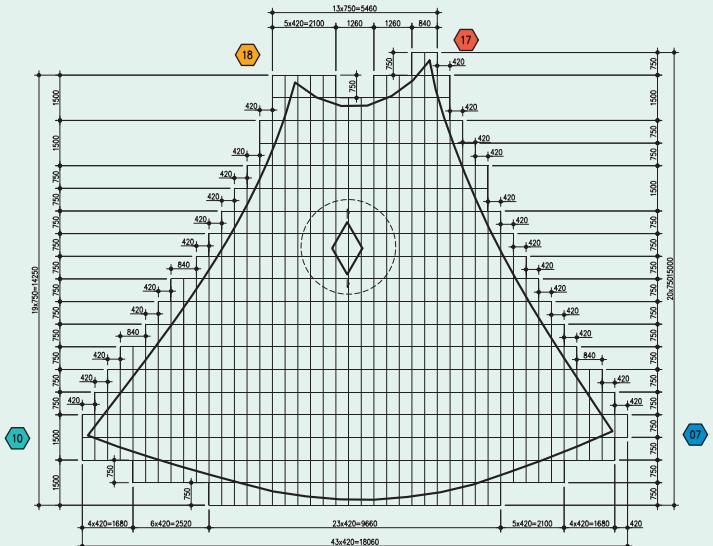

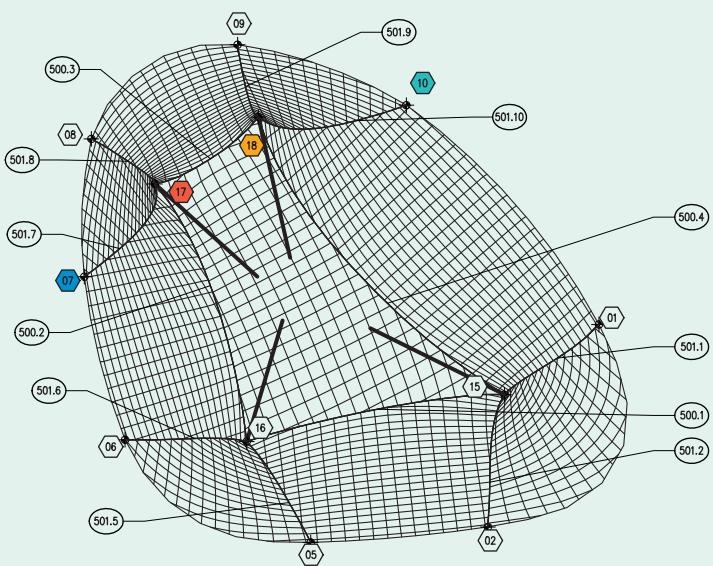

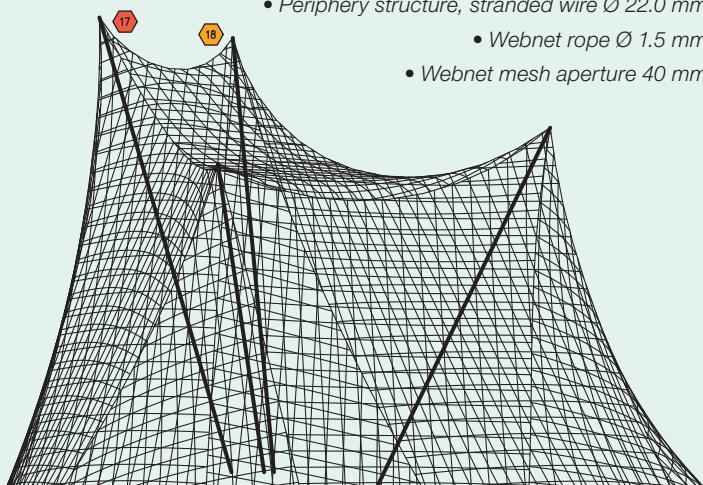

44.5

## ***KNIE'S children's zoo, Rapperswil (Switzerland)***

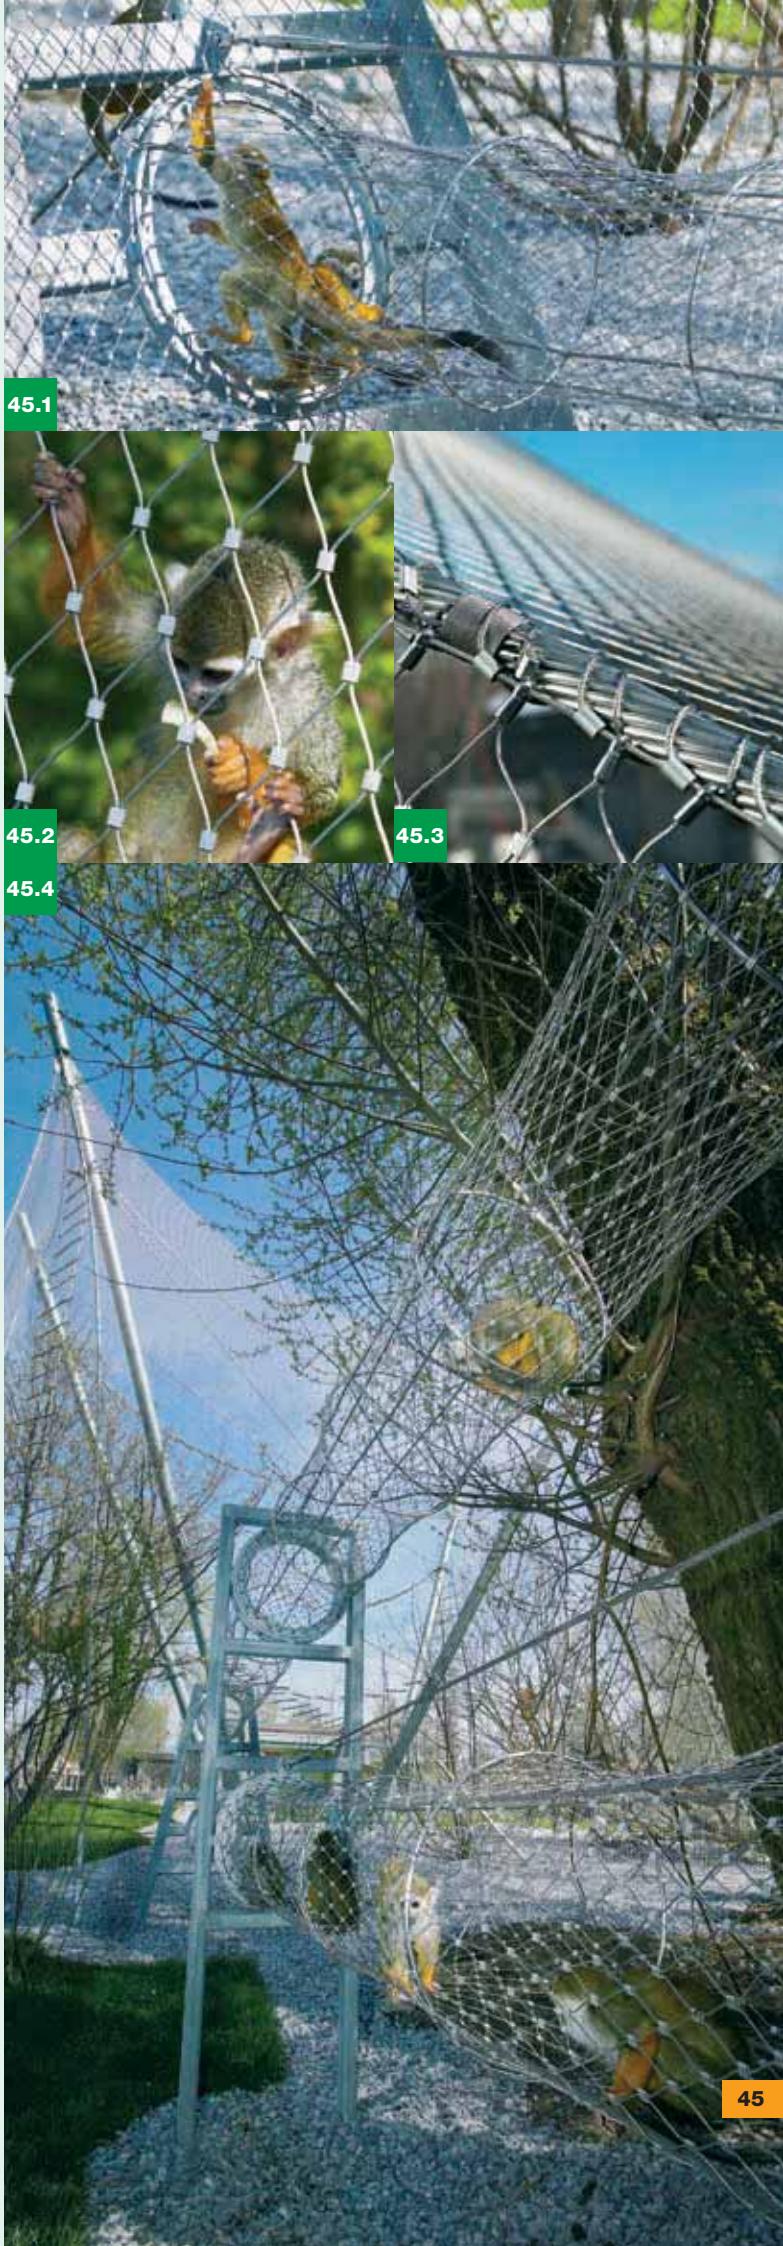

#### **Jungle zone, Webnet size 700 m<sup>2</sup>**

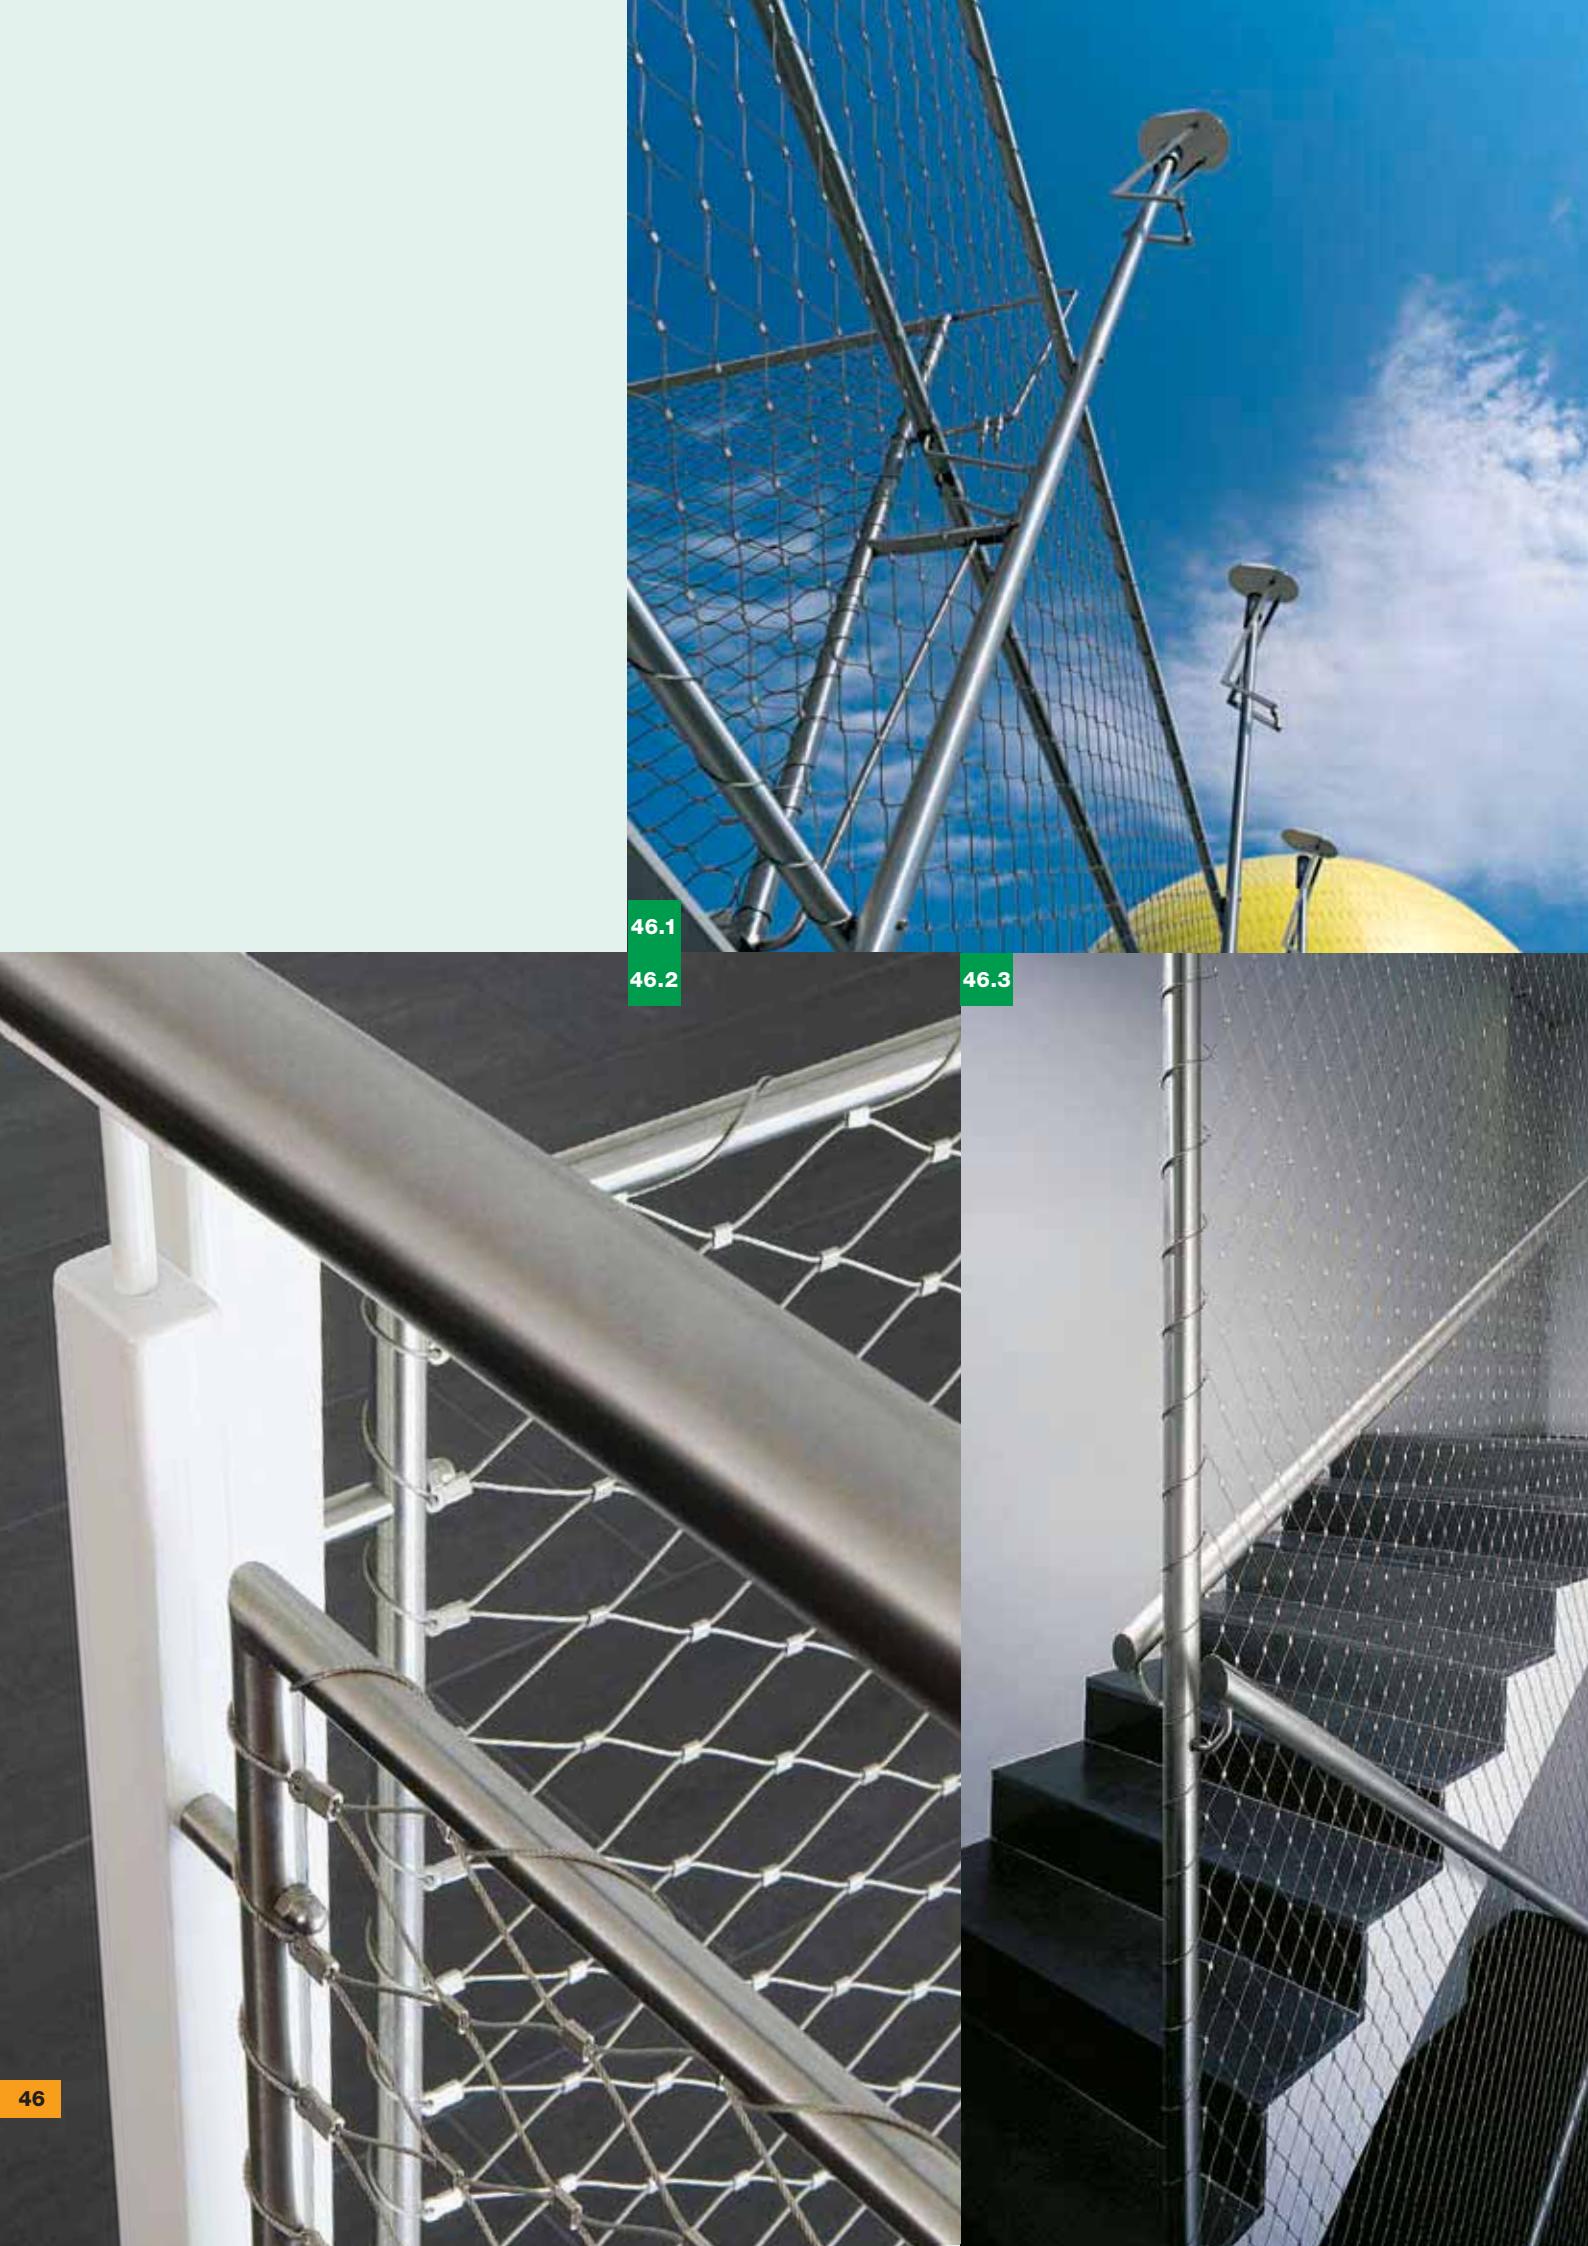

- Periphery structure, stranded wire Ø 22.0 mm
    - Webnet rope Ø 1.5 mm
    - Webnet mesh aperture 40 mm

## Webnet projections

Jakob AG can serve you with turnkey, all-in-one solutions. On request, you can also obtain separate services such as consulting and planning, engineering, or the assembly of complex wire-rope structures.

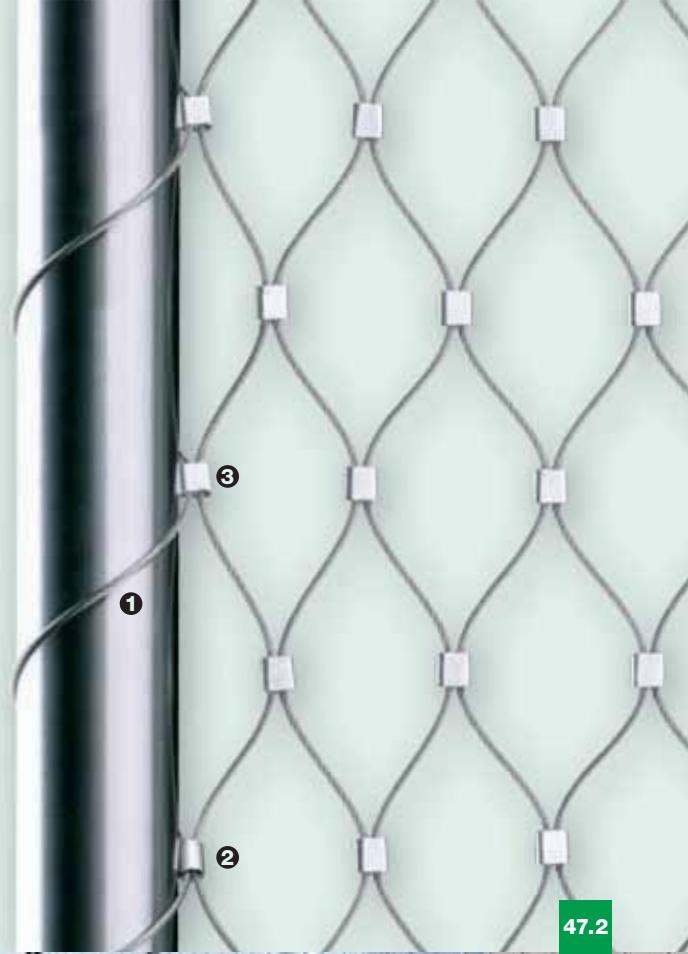

# Jakob® INOX LINE

The Jakob® INOX LINE **Webnet** is ideal for **protective functions** and offers intelligent solutions for **attachment** and **perimeter design**.

Combined with architectural wire ropes and the acclaimed Jakob® INOX LINE **G1** greening system, its range of applications extends beyond protection and support, functioning as a **training system** for plants in façade greening applications. Additionally, the Webnet opens up completely new dimensions for the aesthetic design of multifunctional barriers or as “passive safety systems” wherever rugged but resilient fall-stopping nets are needed.

## Left:

Webnet type A mounted on a tube with perimeter rope ① and hollow sleeves ②

The sleeves are swaged on site with a hand-operated tool ③

47.1

47.2

47.3

### **Rankhof Stadium, Basel (Switzerland)**

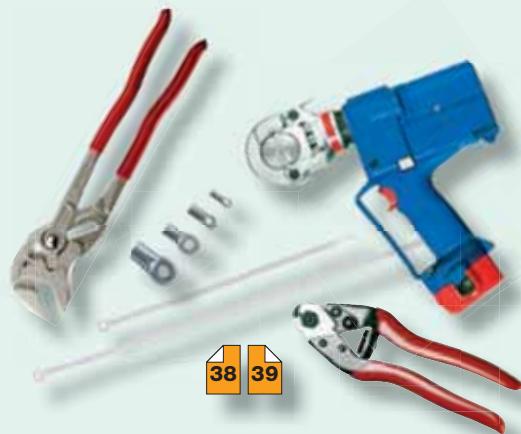

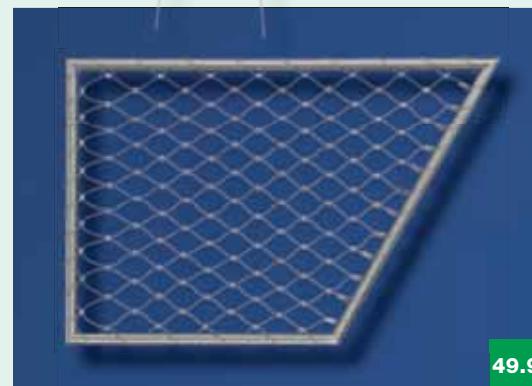

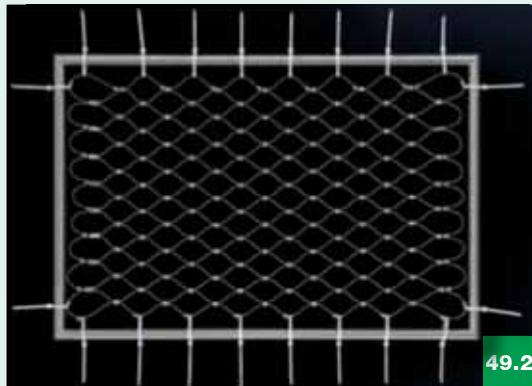

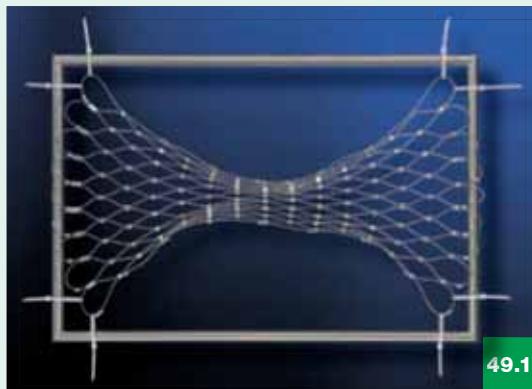

- Webnet rope Ø 2.0 mm, mesh aperture 40 mm
- The Webnet can be retensioned in the horizontal direction

48.1

48.2

### Webnet assembled in a rectangular tubular frame

Assembly example with horizontal meshes (**type A, H18**):

**49.1** Center and attach Webnet at the four corners with cable ties.

**49.2** Center and tension Webnet with cable ties.

**49.3** On one half of the frame, thread perimeter rope from the middle of the top cross member to the middle of the bottom cross member, going through each Webnet sleeve and around the tubular frame opposite each sleeve. Thread in same direction throughout.

**49.4** Thread perimeter rope on the other side of the frame as described in step 49.3. The ends of both perimeter ropes must be threaded through the last sleeve and then pulled taught. Now, all cable ties can be removed.

**49.5** Swage the sleeves with the Webnet swaging tool, and cut off loose ends of the perimeter rope.

### Webnet assembly in a trapezoidal tubular frame

Assembly example with horizontal meshes (**type A, H9**):

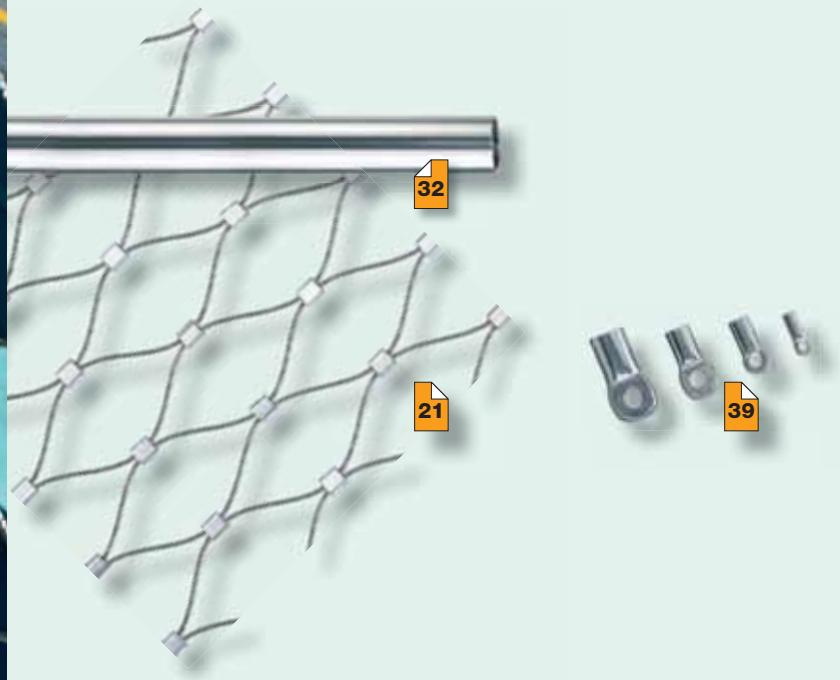

**49.6** Center and tension Webnet with cable ties. Mark all cutoff points along and parallel to the skew side, and cut.

**49.7** Use the battery-powered swaging tool to swage the Webnet eye ends onto the loose ends of the wire rope.

**49.8 and 49.9** Same procedure as in figs. 49.4 and 49.5.

50.1

**Diving tower, open-air pool in Burgdorf (Switzerland)**

- Webnet rope Ø 1.5 mm, mesh aperture 100 mm

50.2

## Welded Webnet tubular frame

Fully strung tubular frames according to your dimension sheets, with matching assembly accessories for attachment on the mounting structure.

What we need from you:

- dimensioned drawing of frame with tube Ø 17.2 or 26.9 mm
- Webnet order No. with rope Ø and mesh aperture **W**, type **A** or **B**
- vertical mesh **V** or horizontal mesh **H**
- number of tube holders and spacers
- description of mounting surface
- see ordering example on **page 19**  
and items on **page 33**

**Fig. 51.1**

Trapezoidal tubular frame with Webnet mesh **H**

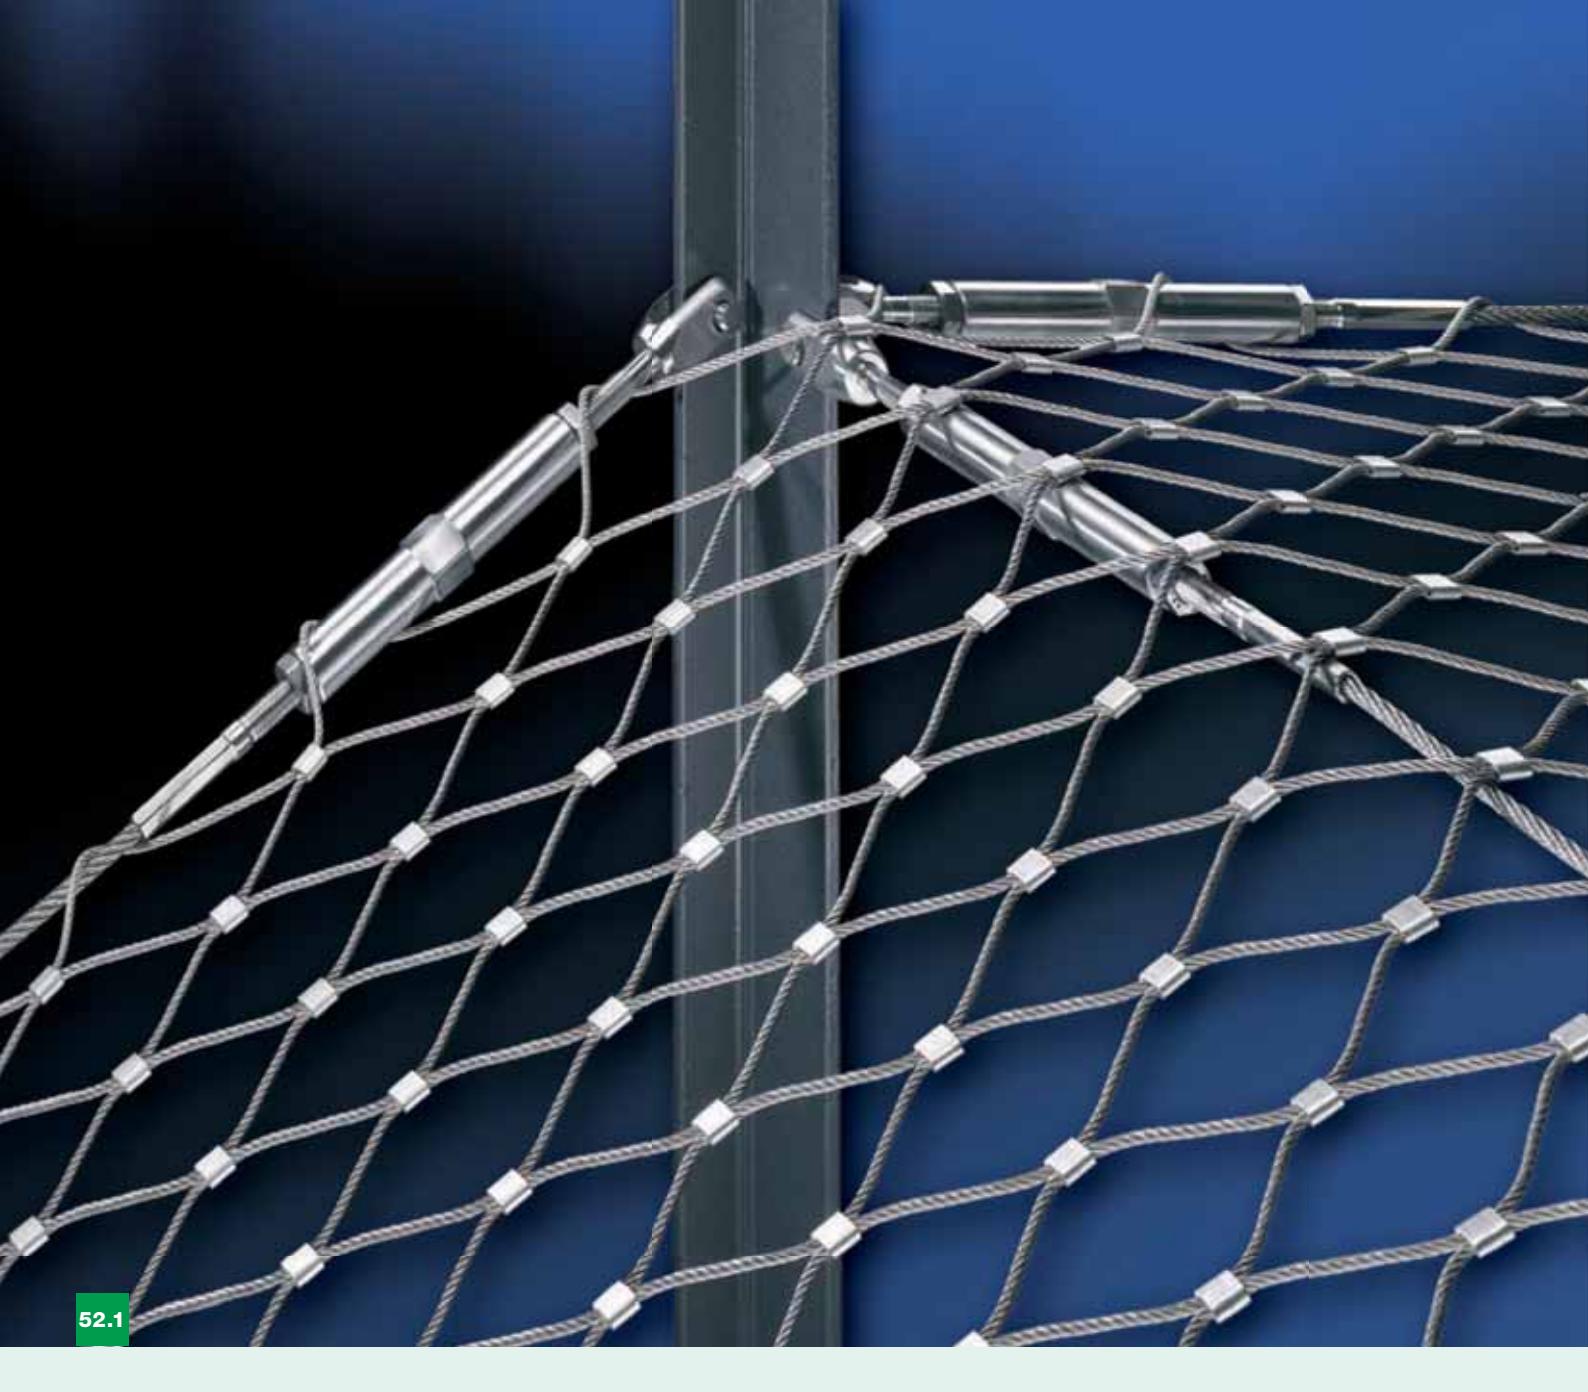

Rope Ø 1.5 mm, mesh aperture 60 mm

**Fig. 51.2**

## The Crossnet by Jakob® INOX LINE

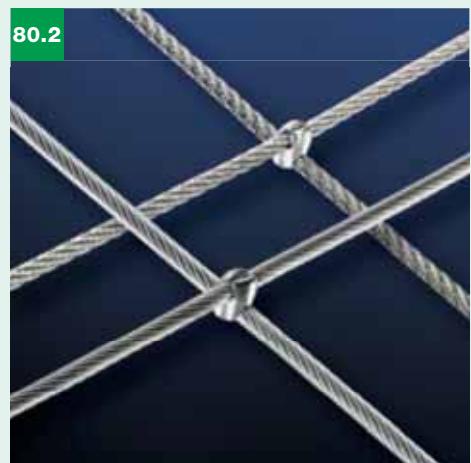

Crossnet stands for a sophisticated combination of stainless steel wire rope and connecting elements.

The new cross clamp is both elegant and unobtrusive. The ample configuration latitude provided by **Crossnet**, such as the variable mesh aperture in combination with our proven rope-end connectors, is a challenge to the imagination and will inspire new creations.

**Crossnet 2 mm, No. 30586-0200**

- Minimum mesh aperture: 40 mm
- Stainless steel stranded wire, Ø 2.0 mm, 1 x 19
- Stainless steel ropes, Ø 2.0 mm, 6 x 7 + WC or 6 x 19 + WC rope construction

**Crossnet 3 mm, No. 30586-0300**

- Minimum mesh aperture: 40 mm
- Stainless steel stranded wire, Ø 3.0 mm, 1 x 19
- Stainless steel ropes, Ø 3.0 mm, 6 x 7 + WC or 6 x 19 + WC rope construction

### Crossnet frames

The wire-rope and stranded-wire sections can be combined with the extensive selection of end connectors featured in the **Jakob® INOX LINE** range.

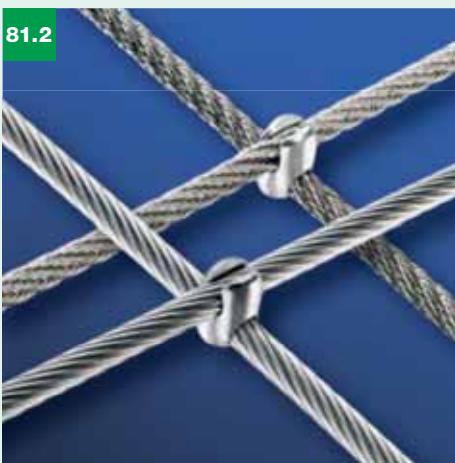

**80.3**

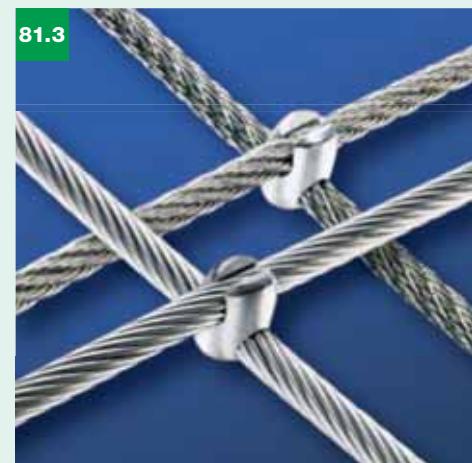

**Crossnet 4 mm, No. 30586-0400**

- Minimum mesh aperture: 60 mm
- Stainless steel stranded wire, Ø 4.0 mm, 1 × 19
- Stainless steel ropes, Ø 4.0 mm, 6 × 7 + WC or 6 × 19 + WC rope construction

**Crossnet 5 mm, No. 30586-0500**

- Minimum mesh aperture: 60 mm
- Stainless steel stranded wire, Ø 5.0 mm, 1 × 19
- Stainless steel ropes, Ø 5.0 mm, 6 × 7 + WC or 6 × 19 + WC rope construction

**Crossnet 6 mm, No. 30586-0600**

- Minimum mesh aperture: 60 mm
- Stainless steel stranded wire, Ø 6.0 mm, 1 × 19
- Stainless steel ropes, Ø 6.0 mm, 6 × 7 + WC or 6 × 19 + WC rope construction

#### **Special Crossnet designs**

A combination of stainless steel ropes and stranded wire, with different rope and strand diameters.

**81.4**

**81.5**

### Frankfurt Airport (D)

#### Projectile trap

- Crossnet rope Ø 2.0 mm, mesh aperture 50 mm
- Crossnet size total: 2600 m<sup>2</sup>
